

ANIMALS / PETS

Animal and Pet owners who are users of a Guardian Angel™ International GPS tracking Device use the latest technology and mapping software such as Google Earth™ or direct to a mobile phone.

The tracker will track within 15 feet (5metres) in real-time updates and 2, 4 or 8 hour last position notification update. The device can be “GEOLOCKED” to a position, such as a home, a farm, a field or specific vicinity using our “GEOFENCE” technology. **Matchbox size**, it can be attached to animals such as racehorses, sheep, goats, pigs, cattle or domestic pets providing reassurance to their owners. Tags cannot be removed without alerting the owner.

The tracker device can be used with or without monitoring services. Farmers can use the device to keep an eye on their animals’ overnight or watch on their specific movements. Dog owners (Crufts™ and domestic dog owners) and farmers can use the tracker for reassurance whilst racehorse owners can use for both protection and performance monitoring since our GPS devices have the ability to analyse speed and distance travelled.

A dedicated monitoring service for animals and domestic pets can be provided to detail last actual known position if local monitoring is not required by the owner for an additional cost.

Guardian Angel International is the world leader in global GPS tracking and monitoring devices. We cover personal protection for children, adults, disabled, and the elderly. We track personal assets, vehicles, yachts, high value assets and plant equipment. Our tracking devices are used for pets, and special animals. We research and develop our products through quality assurance, customer feedback and our own 24/7 helpdesk which leads to better design and functionality for our customers.
