

ASSETS / MACHINERY

Asset owners who are users of a Guardian Angel™ International GPS tracking Device use the latest technology and mapping software such as Google Earth™ or direct to a mobile phone.

The tracker will track within 15 feet (5metres) in real-time updates and 2, 4 or 8 hour last position notification update. The device can be “GEOLOCKED” to a position, such as a home, a farm, a field or specific vicinity using our “GEOFENCE” technology. **Matchbox size**, it can be included in packages (cash transit, diamonds, gold, high value items) or can be permanently attached to vehicles, plant and machinery using fixed power attachments, ideal for transport, fleet management and logistic companies and insurance organizations.

The tracker device can be used with or without dedicated monitoring services. Vehicle owners can be notified immediately when their car has moved or have been stolen and can be tracked until recovery. Plant and machinery owners can use the device to prevent equipment moving from a specific building site. Insurance companies can recover assets or prevent assets leaving the country by restricting areas such as a container ports or airports to prevent insurance loss outside the country or request their customers to have a Guardian Angel™ International GPS tracking Device as a mandatory requirement before providing insurance. Road Pricing Solutions are supported by Guardian Angel International which can track distance travelled, speed and direction. Insurance by the mile™ is our value-added solution for insurers for providing base level insurance.

A dedicated monitoring service for asset protection can be provided to provide last known position if local monitoring is not required by the owner.

Guardian Angel International is the world leader in global GPS tracking and monitoring devices. We cover personal protection for children, adults, disabled, and the elderly. We track personal assets, vehicles, yachts, high value assets and plant equipment. Our tracking devices are used for pets, and special animals. We research and develop our products through quality assurance, customer feedback and our own 24/7 helpdesk which leads to better design and functionality for our customers.
